

Let's Roll!

For Extreme Conditions, ISKY's New

*EZ-ROLL™ (EZX)

*Patent Pending

Roller Lifters ARE "NEEDLE FREE"!

**EXTREME-LOAD RACING'S
NEW STANDARD OF EXCELLENCE!**

HARDCORE RACERS:

For your environment, needles are old news! At ISKY, we've seen the future of roller lifter bearing development and it's NEEDLE FREE!

When you install a set of New **EZ-Roll™** (EZX) "needle-free" Roller Lifters in your Race Engine, you'll never have to worry about the lingering problem of needle bearing overload, so common in Drag Racing today with aggressive "killer" cam profiles, 350+ lbs. Seat and over 1,000 lbs. Valve Open Spring Pressures.

Now Available!
Hi-Tech EZ-Roll™
.937 Keyway
Roller Lifters!

The simple truth about needle bearings is they only perform well in light to moderately high load applications. If you're tired of Pre-Mature Roller Bearing Failures (caused by over-loaded needles wearing down and leading to a fractured outer wheel) EZX is the solution! Even if you've never had a needle bearing failure, you've probably heard the horror stories from other racers and have been hoping for a better alternative - EZX is the ONLY solution for your Peace Of Mind!

EZ-Roll™ "EZX" bearings really live up to the "HYPE" because needles are replaced by a special Hi-Tech/Low Friction "Solid Bearing Raceway." With their advanced "needle-free" design and greater surface area to load distribution footprint, they deliver a solid 350% higher load rating than needles!

EZX bearings have been extensively test proven both on the Isky Spintron and in the field and we guarantee they'll out-perform ANY Needle-Bearing Roller Lifter (even those that commonly sell for over \$2,000) because they're simply better by design!

Although nothing in racing lasts forever - we CAN guarantee you that **EZ-Roll™** "EZX" solid bearing raceway rollers will keep on rolling, long after needle bearings have expired - especially in extreme load environments!

EZ-Roll™ "EZX" is an EXCLUSIVE Option ONLY for Isky Red Zone Roller Lifters. Rebuilding services are also available to convert conventional "Needle Bearing" Red Zone lifters to **EZ-Roll™** "EZX" - because under extreme loading conditions, you need the latest and best technology available to consistently deliver absolute, maximum endurance™ — not yesterday's solution; And needles really are yesterday's old news.

"Traditional Needle-Roller Bearing & its small load distribution footprint."

...ISKY's Revolutionary new wide-footprint / low friction EZ-Roll™ (EZX) Bearing!

ROLL "EZ"....

.... RED-ZONE™ Safe!
